GitHub: github.com/thethomaseffect

LinkedIn: linkedin.com/in/thomasjamesgeraghty

Senior Full-Stack Engineer with 13+ years of experience delivering cloud-native, event-driven platforms. Most of that work has been full-stack, with some frontend-only and backend-only roles. Frequently an early hire at startups, used to owning the entire stack: CI/CD, databases and database administration, deployment, CDN, monitoring, and alerts. Specialised in TypeScript, Node.js, React, and AWS, with a track record of improving performance and reliability. Especially skilled in large-scale refactoring.

I use AI and LLM tooling daily, primarily using Cursor editor with Claude. I write a lot of agents with MCP integrations, using hooks and deep memory integration to assist developing at a high velocity.

Irish citizen · May work in the EU/EEA and UK without restriction · English — Native; Swedish — Basic (insufficient for day-to-day work)

Where I have lived and worked

Skills

Core

TypeScript · JavaScript · Node.js · React · CSS · HTML · AWS · Docker · Git · PostgreSQL · REST APIs · CI/CD · Kubernetes · GitHub Actions · Cursor · Claude / LLM tooling · Microservices · E2E testing · Redux · Apache Kafka · MCP · AI agents · Agent hooks / memory · Amazon ECS · Amazon EKS · Continuous deployment · Grafana · Elasticsearch · Figma · AWS Lambda · AWS CDK · CloudFormation · CloudWatch

Also used

Analytics · AngularJS · Argo CD · ASP.NET · Babel · Bitbucket · C++ · C# · Cypress · DBpedia Spotlight · Docker Compose · Express · Facebook Graph API · Feature flags · Flow · GitHub · gulp · IoT · Java · Jenkins · Jest · jQuery · JSON-LD · JWT · Kaldi · Linked Data · Linux · Material UI · MongoDB · MySQL · Next.js · Microsoft Office · OWL · PHP · Planout · Playwright · Protractor · Python · RDF · RisingWave · Rust · Selenium · Sentry · SharePoint · SPARQL · SQL Server · Amazon SQS · Storybook · styled-components · Svelte · Tailwind CSS · Tampermonkey · Terraform · Virtuoso · Vite · WordPress · XMPP

Experience

Sambla Group AB

Stockholm, Sweden

Senior Developer

Jan 2026 – Apr 2026

Full-stack engineering with a focus on QA and UX. My proudest achievement was rewriting core asset rendering to reduce bundle size on page load by 97.8%. Other wins include:

- Overhauling internal alerting to be much more precise, using Sentry and CloudWatch to deliver alerts into Slack along with building usable dashboards for related data. During this project I reduced error count by fixing the top 10 more reoccurring bugs, reducing error counts by 90% per month on average.
- Developed a complex system targeted towards new hires which enabling training of Claude mode memory from day 1 by running a single prompt.
- Wrote a Tampermonkey script to enable a safe way of injecting devtools into the web applications without any security risks associated with bundled solutions. This enabled faster user testing of new features, targeted at members of data science team verifying correct implementation of user experiments before launch.
- Wrote CLI tools to launch various brands and markets in testing environment to cut down on manual processes wasting developer time.
- Used feature flags and product analytics, and owned AWS infrastructure with CDK and CloudFormation.

TypeScript · JavaScript · React · Node.js · Next.js · AWS · AWS CDK · CloudFormation · Docker · Microservices · GitHub Actions · Feature flags · Analytics · CloudWatch · Sentry · Claude / LLM tooling · Figma · CSS · Git · GitHub · HTML · CI/CD · MCP · AI agents · Agent hooks / memory · Tampermonkey · Docker Compose · Amazon ECS · Continuous deployment

Lolo Company AB

Stockholm, Sweden

Senior Software Engineer

Apr 2025 – Aug 2025

Worked on asynchronous data ingestion pipelines using streaming data stores assisted by microservices. This accomplished turning protocol specific telecommunications data from IoT technologies into more simple modern forms more suited to analytics platforms. Relevant industries include automotive and telecommunications.

- Deployed and operated services with Kubernetes and Argo CD.
- Implemented monitoring and alerts with Grafana.
- Transformation of upstream data from Amazon SQS piped into RisingWave DB, MongoDB and send downstream via Apache Kafka

Microservices · Apache Kafka · IoT · TypeScript · JavaScript · Node.js · Argo CD · Kubernetes · Docker · Terraform · Grafana · PostgreSQL · Cursor · Git · GitHub · CI/CD · Amazon SQS · RisingWave · MongoDB · Docker Compose · Amazon EKS · Continuous deployment

**Ronja Technologies AB***Stockholm, Sweden***Frontend Software Engineer**

Dec 2024 – Jan 2025

As an early hire this role involved quickly studying the existing architecture and gaining the ability to write and deploy new features with little mentoring due to the intensity of deliverables in a similar fashion to what might be expected of a consultant. This involved using Svelte with TypeScript and Tailwind CSS primarily, though I also added a Github action for validating frontend changes for pull-requests and fixed many errors caused by pull requests affecting files not directly changed by said pull-requests.

Svelte · TypeScript · JavaScript · Tailwind CSS · CSS · Vite · Playwright · GitHub Actions · Node.js · Figma · Git · GitHub · HTML · CI/CD

Career break*Stockholm, Sweden***Novel writing**

Aug 2023 – Nov 2024

A planned break focused on writing a novel.

**Regent AB***Stockholm, Sweden***Senior Consultant**

Mar 2022 – Jul 2023

Taking advantage of my wide range of skills and experiences I helped fill gaps that may exist in projects at client companies in order to help them achieve the greatest success possible and provide value difficult to find elsewhere in the industry.

I worked as a consultant at Klarna and Tre during this time, one helping mentor more junior members of a team working on cutting-edge projects as well as providing assistance in making sure the direction of the team was focused and any incidents were handled effectively in the event of no management being available at the time. The second was much more standard, working on projects to the best of my abilities providing a level of quality experience that could not be satisfied with only the company's resources at the time. Both engagements were frontend-focused.

TypeScript · JavaScript · React · Redux · CSS · styled-components · Node.js · Jest · Cypress · Storybook · AWS · Docker · Figma · Git · GitHub · HTML · CI/CD

Career break*Remote***Stealth startup POC development**

Oct 2020 – Feb 2022

Built a proof-of-concept for a new platform in Next.js and React, deployed on Vercel.

Next.js · React · JavaScript · CSS · Node.js · Vercel · Git · GitHub · HTML

**Forward Health / Pando***London, United Kingdom*

Feb 2019 – Sept 2020

Backend Lead

Jan 2020 – Sept 2020

My responsibilities as a lead were largely the same as when I was a senior backend engineer, with an added focus on uptime, creating metrics based on percentage uptime, percentage of calls resulting in 5xx errors and amount of releases rolled back. I implemented a new release process working with the QA lead and wrote a suite of smoke tests for all releases that caught all but the most obscure new issues introduced.

- Developed cutting-edge HealthTech in collaboration with the NHS.
- Deployed with Docker and AWS, using Terraform for infrastructure.

Node.js · TypeScript · JavaScript · PostgreSQL · MySQL · Express · REST APIs · XMPP · React · Redux · E2E testing · Jest · Docker · Terraform · AWS · CSS · Git · GitHub · CI/CD · Docker Compose · Amazon ECS

Senior Backend Engineer

Feb 2019 – Jan 2020

Main responsibilities involved taking ownership of a 2 year old node.js application from an external consulting company and then proceeding to optimise and increase robustness for scalability. While the position was backend focused, I did also maintain the internal dashboard application written using React and Redux, massively improving performance by implementing real pagination on backend API and replacing legacy hardcoded user roles with a DB-backed implementation.

- Migrated entire codebase from JavaScript to TypeScript using babel.js
- Deployed with Docker and AWS, using Terraform for infrastructure.
- Wrote a test suite featuring both unit and integration tests
- Migrated old ORM code to more optimised PSQL in an agile manner allowing both to run in parallel

Node.js · TypeScript · JavaScript · Babel · PostgreSQL · MySQL · React · Redux · Express · REST APIs · XMPP · Jest · Docker · Terraform · AWS · CSS · Git · GitHub · CI/CD · Docker Compose · Amazon ECS

**Apolitical***London, United Kingdom***Senior Software Engineer**

Sept 2018 – Dec 2018

A combination of developing totally new services and developing alternatives to existing wordpress solutions in node.js. Tech stack was primarily node.js REST APIs written with express and frontend applications written using ES6+ with React, Flow, Material UI and Redux, but there was also work involving Rust and PHP. Provided support for data science engineering in the form of code review, leveraging my past experience with Python. Aside from CRUD-type applications also developed an AB testing solution flexible across entire tech stack using Facebook's Planout libraries.

Node.js · JavaScript · TypeScript · Babel · Express · React · Redux · Material UI · CSS · Flow · REST APIs · Python · Rust · PHP · WordPress · MongoDB · Jest · Docker · AWS · Planout · Git · GitHub · HTML · CI/CD · Docker Compose

**Spirable (formerly Photospire)***London, United Kingdom***Senior Software Engineer**

May 2018 – Sept 2018

Modernised a complex angular 1 front end and uplifted test coverage and coding standards to a much higher standard. Mostly involved maintaining an existing codebase but also developed a microservice for live sports betting in AWS lambda that interacted with Facebook's graph API. Active role in mentoring more junior members and participating in the hiring process.

AngularJS · JavaScript · TypeScript · CSS · Node.js · REST APIs · AWS · AWS Lambda · Microservices · Facebook Graph API · E2E testing · Protractor · Jest · Git · GitHub · HTML

**The Hut Group (THG)***Manchester, United Kingdom***Senior Software Engineer**

Oct 2016 – May 2018

Assisted in building state-of-the-art E2E testing framework with a small highly skilled team, enabling rapid engineering iteration. Other duties mostly consisted of working as a full-stack engineer on the site improvements team, developing various features for over 30 sites in multiple languages and cultures.

- The E2E framework was built on Selenium WebDriver.

JavaScript · HTML · CSS · jQuery · Node.js · Java · E2E testing · Selenium · Jest · Jenkins · MySQL · Git · Bitbucket · CI/CD

BBC*United Kingdom***Senior Software Engineer**

May 2015 – Sept 2016

Worked as part of a highly skilled team building a revolutionary media discovery tool. Key technologies include Node.js, AngularJS, MongoDB and Elasticsearch. The project also utilizes key linked data technologies such as virtuoso and DBpedia Spotlight. Other interesting technology includes gulp, next-generation JavaScript using BabelJS, Kaldi speech-to-text and docker. The team also practices agile development methodologies such as continuous deployment, git flow and scrum.

I was involved in the entire stack of the application with special focus in information security and semantic web technologies due to my expertise in those areas. During my time on the project I wrote the authentication and authorization system utilizing JWT best practices, integrated semantic concept extraction, improved large portions of the build infrastructure, modernized large portions of the codebase using ES6 as well as a host of other client and server features and bug fixes.

Node.js · JavaScript · AngularJS · HTML · CSS · Express · REST APIs · MongoDB · Elasticsearch · Virtuoso · DBpedia Spotlight · Linked Data · Docker · Babel · gulp · JWT · Kaldi · E2E testing · Jest · AWS · Jenkins · Git · Bitbucket · CI/CD · Continuous deployment · Docker Compose

**Neueda Consulting***Belfast, United Kingdom***Software Engineer**

Feb 2015 – May 2015

Engineer working in the capital markets sector. High performance financial systems written in C++. Short term projects where my in-depth knowledge of topics such as pattern matching and responsive web design contributed towards their success.

C++ · JavaScript · HTML · CSS · jQuery · Node.js · Linux · Git · Bitbucket

**Insight Centre for Data Analytics***Galway, Ireland***Research Assistant, Sensor Middleware Unit**

Jun 2014 – Nov 2014

Worked on VITAL FP7 European project as part of Sensor Middleware Unit

- Designed ontology for smart cities that improved on the state of the art.
- Led development of REST interfaces and linked data querying for a decentralized system based on the microservices pattern, which was language and OS agnostic.
- Aided in project co-ordination, which included chairing online meetings and driving the direction of deliverables as well as more general project management.

Java · Python · REST APIs · Linked Data · RDF · OWL · SPARQL · JSON-LD · Microservices · IoT · Linux · Git

**Microsoft***Dublin, Ireland***Intern International Project Engineer**

Jun 2013 – Jun 2014

Worked as an engineer on the Microsoft Office International Software Group

- Wrote JavaScript library providing localization to Office and SharePoint apps shipping in next generation versions of Office
- Improved internal localization processes for SharePoint and Office Apps
- Developed tools for other international project engineers to improve localization process
- Developed large client-side JavaScript solution backed by node.js web service.
- Researched and developed prototypes to modernize internal tools across entire organization
- Improved several internal static analysis tools for testing
- Participated in internal Garage experiment and innovation group

JavaScript · HTML · CSS · jQuery · Node.js · C# · ASP.NET · SQL Server · SharePoint · Microsoft Office · Git

Education

Bachelor of Science (Honours) in Software Development

Galway-Mayo Institute of Technology (GMIT) · Atlantic Technological University (ATU) (current title)

Galway, Ireland · Sept 2009 – May 2013 · GPA 78 — First Class Honours (1:1)

Bachelor of Science (Hons.) in Software Development (2009–2013)

Degree projects

Internet Impression Visualiser · Java · Grade 92%

Concurrent Bing crawler that scores pages and links, then builds a word cloud of web opinion on a search term.

Producer–consumer thread pools, Jackson JSON, Swing UI.

<https://github.com/thethomaseffect/internet-impression-visualizer>

Travers Media Encoder · Python · Grade 88%

Horizontal Django service for cloud video/audio transcoding with libav, SQLite, and remote uploads.

<https://github.com/thethomaseffect/travers-media-tools>

Side projects

github-package-lock-analysis

GitHub Action that diffs nested package-lock changes, looks up CVEs via OSV, and writes an HTML report (optional PR comment).

<https://github.com/thethomaseffect/github-package-lock-analysis>

for-sale

Personal static site for selling household items. React, Vite, English/Swedish, GitHub Pages.

<https://github.com/thethomaseffect/for-sale>

Sunbro.js

Tiny, fast JavaScript string interpolation library.

<https://github.com/thethomaseffect/Sunbro.js>

node-media-synopsis

Node library that builds a synopsis for a film, book, or similar from Google and Wikipedia.

<https://github.com/thethomaseffect/node-media-synopsis>

financeapi-node

CRUD REST API with Node, Express, and MongoDB.

<https://github.com/thethomaseffect/financeapi-node>

finance-api

CRUD REST API in Spring Boot.

<https://github.com/thethomaseffect/finance-api>

monogame-mock-sprites

C# helpers for mock sprites in MonoGame when art assets are not ready yet.

<https://github.com/thethomaseffect/monogame-mock-sprites>

Inertia Imperial

Short visual novel about a galactic emperor waiting to dine with his adopted daughter.

Showcase

Finance REST API (Java)

Spring Boot CRUD API — a compact example of a typed backend service.

Finance REST API (Node)

Express and MongoDB CRUD API with Newman tests.
